Comments : -According to; the 2019 European Society of Cardiology / European Atherosclerosis Society Guidelines for Dyslipidemia management;Therapeutic regimens target goals for LDL-C are < 55,70 &100 for very high , high & moderate risk patients.

-Non HDL-C is an estimation of atherogenic lipoproteins (VLDL, VLDL remnants, IDL, LDL, Lpa) and according to recent guidelines is a better risk indicator for CVD
